## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I, a photo-detector having a middle barrier layer having p-type doping distributed throughout its volume, shown in Fig 4B (embodiment 1)

Species II, a photo-detector having a middle barrier layer having n-type doping in a very narrow delta doping layer located at the junction with the photon absorbing layer, shown in 5B (embodiment 2).

Species III, a photo-detector having a middle barrier layer having n-type doping distributed throughout its volume, shown in Fig 6B (embodiment 3).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Claim 33 recites having a middle barrier layer having n-type doping distributed throughout its volume OR a middle barrier layer having n-type doping in a very narrow delta doping layer located at the junction with the photon absorbing layer.

Claim 50 recites having a middle barrier layer having p-type doping distributed throughout its volume OR a middle barrier layer having p-type doping in a very narrow delta doping layer located at the junction with the photon absorbing layer (not supported in an embodiment).

The following claim(s) are generic: none.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the claims recite a barrier layer having doping distributed throughout its volume OR a having doping in a very narrow delta doping layer located at the junction with the photon absorbing layer, thereby establishing the exclusive characteristics of the doping.
